Pointers on Using the Interclub Snooker App

Mobile friendly guide for players and managers

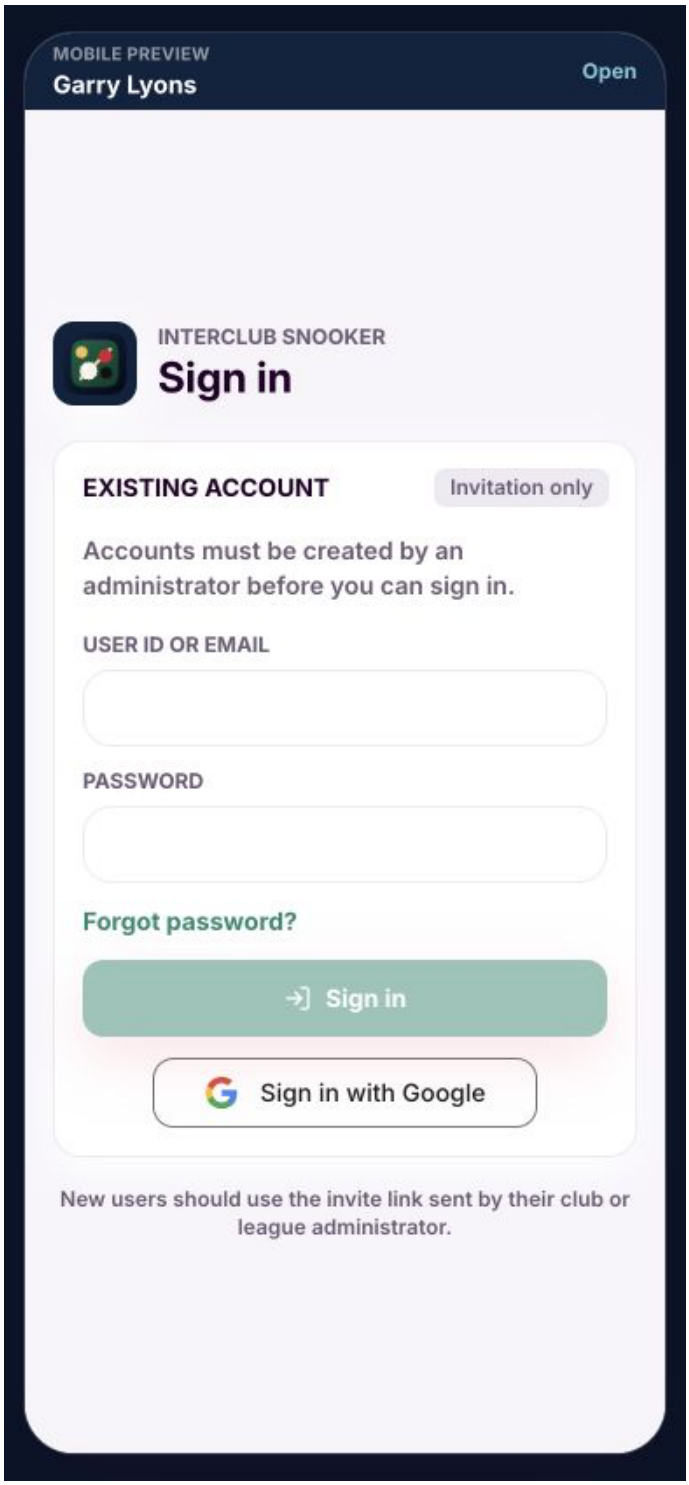

This guide uses real mobile screens from interclubsnooker.com. It focuses on the things people need most often: signing in, checking their home screen, using fixtures, reading tables, and understanding manager match screens.

Fast start

Step	What to do
1	Sign in with the account created by your club or league administrator.
2	If you have more than one role, choose the role you want at the top.
3	Use the bottom tabs: Home, Fixtures, Tables, My Club and More.
4	Managers use Fixtures to open their own match when lineups, scores or breaks need attention.

Sign in

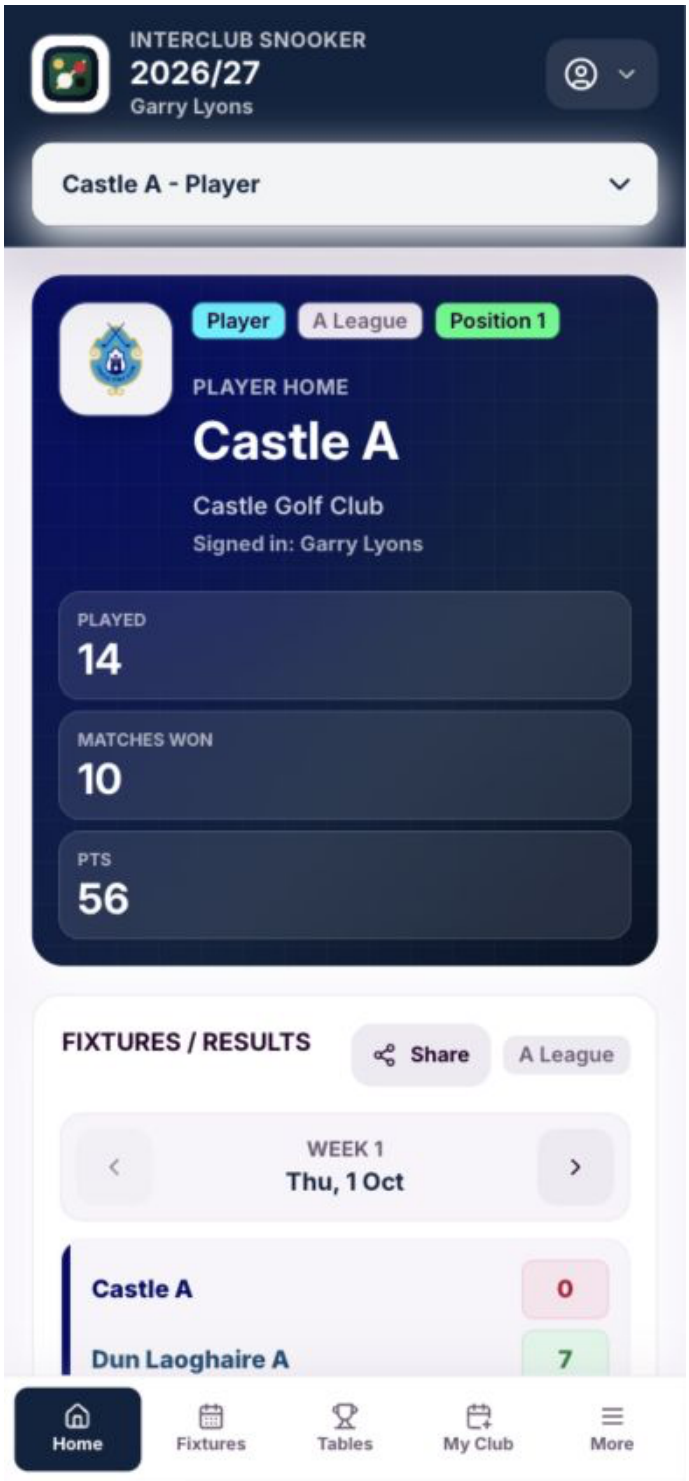

- Use the email address linked to your account.
- Sign in with password or Google where your account supports it.
- Accounts are created by an administrator; there is no public self registration.

Live sign-in screen.

Player home

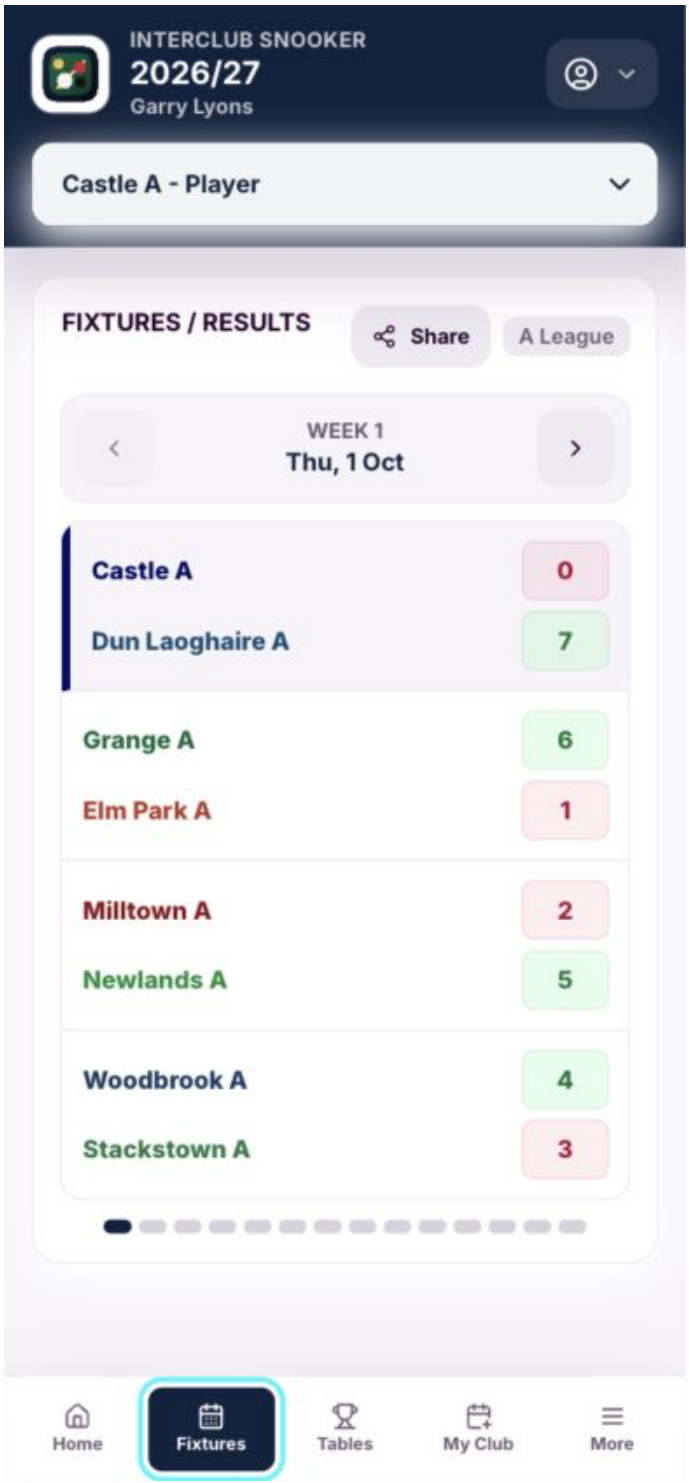

- Home shows who is signed in and which team or role is active.
- Players see team position, team record, fixtures, recent form, their own stats and individual games.
- The role selector only matters for people with more than one role.

Live player home screen.

Fixtures and results

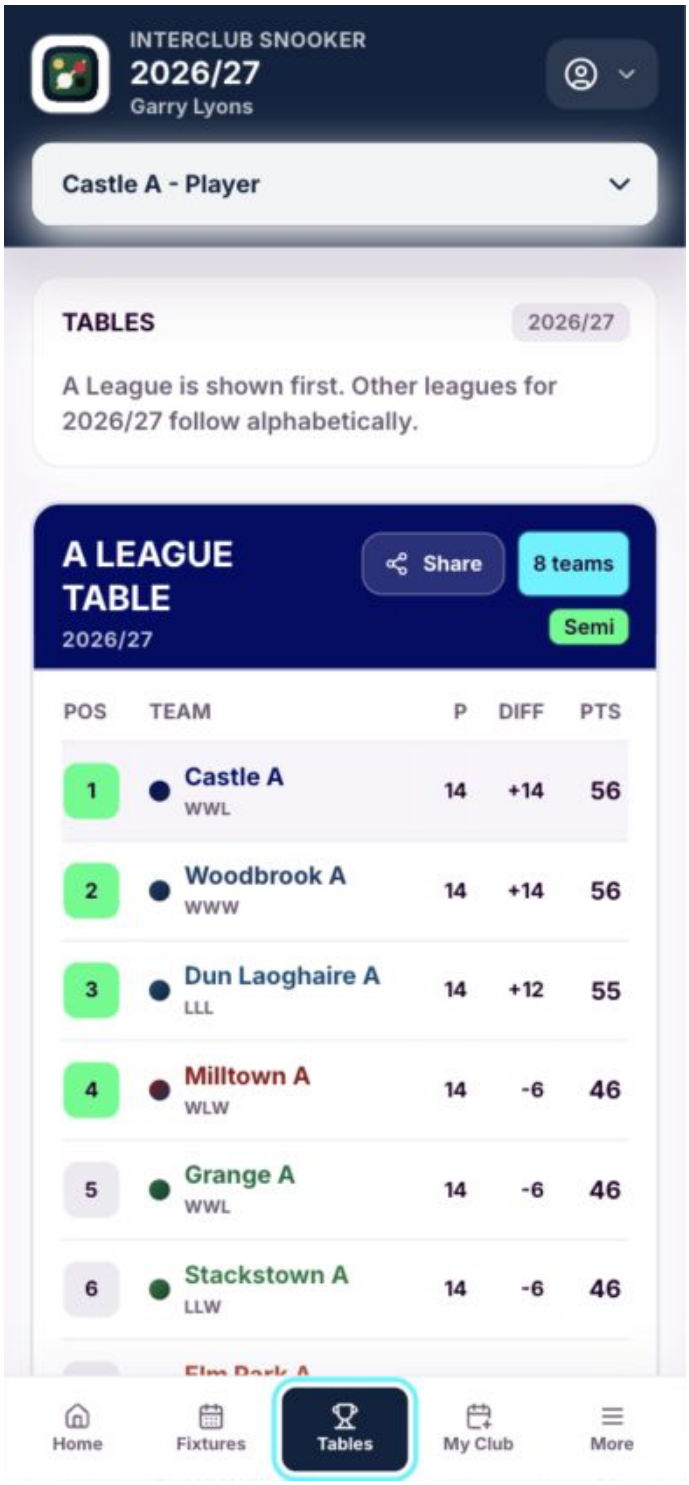

- Fixtures are grouped by week in one panel.
- Players can follow scores and results in their own league.
- Managers see extra match actions only for their own team match.

Live fixtures and results screen.

Tables

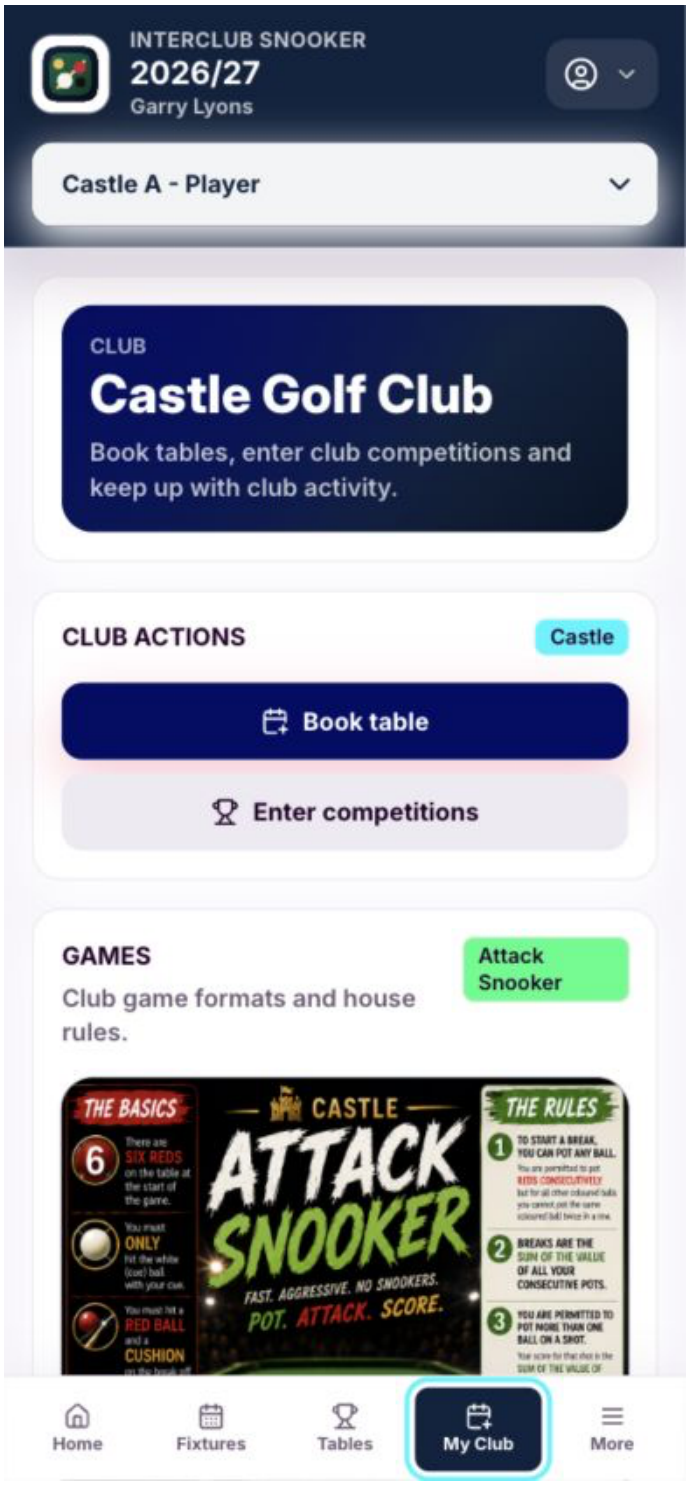

- Your league appears first, then the other leagues below it.
- Use this tab for standings rather than hunting through fixtures.
- League and player tables can be shared where the app allows sharing.

Live tables screen.

My Club

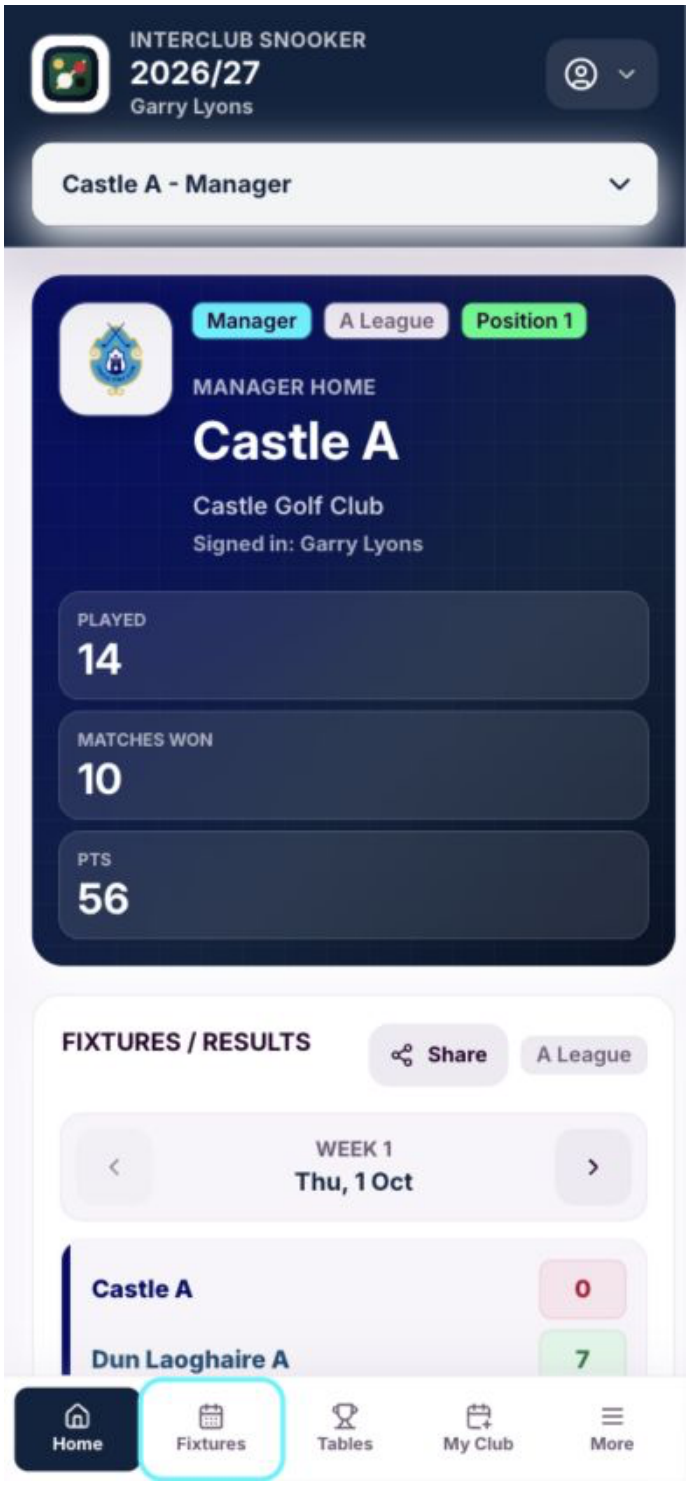

- My Club keeps club activity separate from interclub duties.
- Castle users can book tables and enter Castle club competitions.
- Other clubs will see table booking once it has been set up for that club.

Live My Club screen.

Manager home

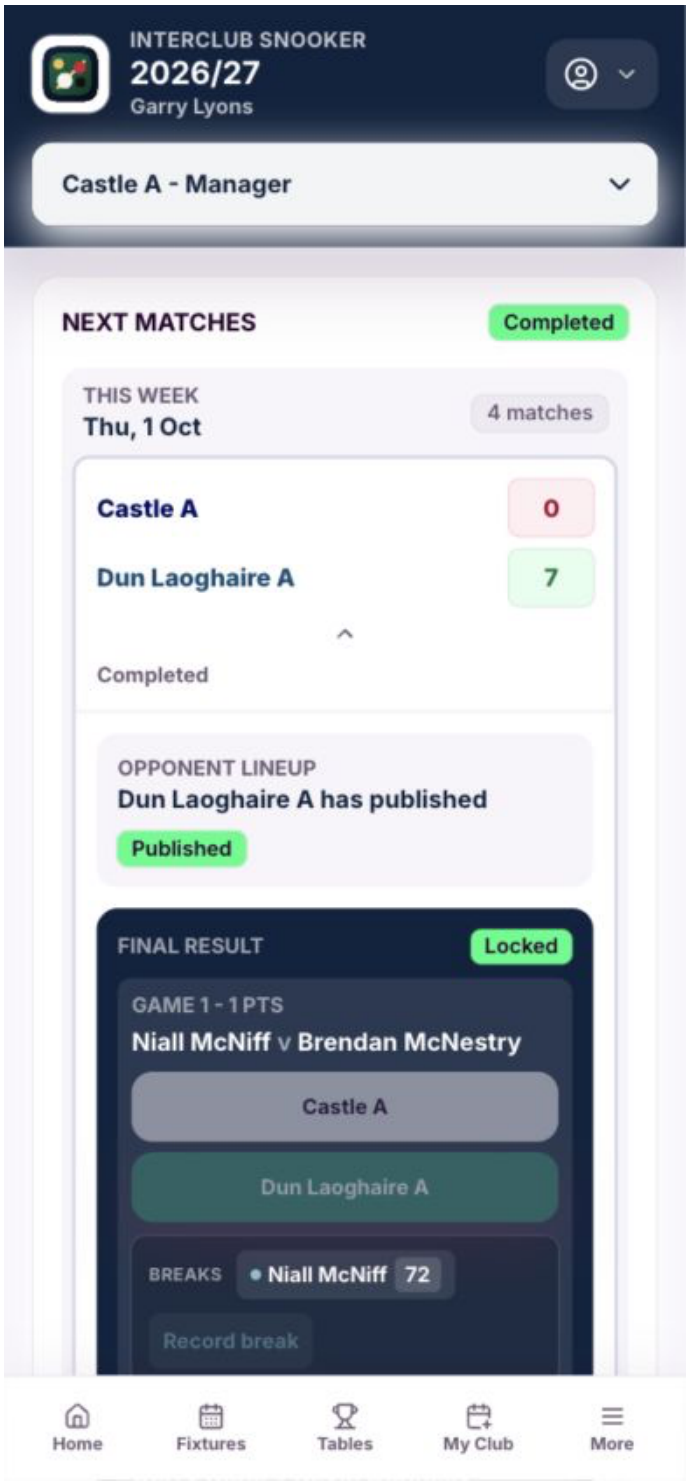

- Managers see team-focused information first.
- A manager who is also a player can change role at the top and gets the correct view for that role.
- Use Fixtures to manage the next match rather than looking for separate admin controls.

Live manager home screen.

Managing a match

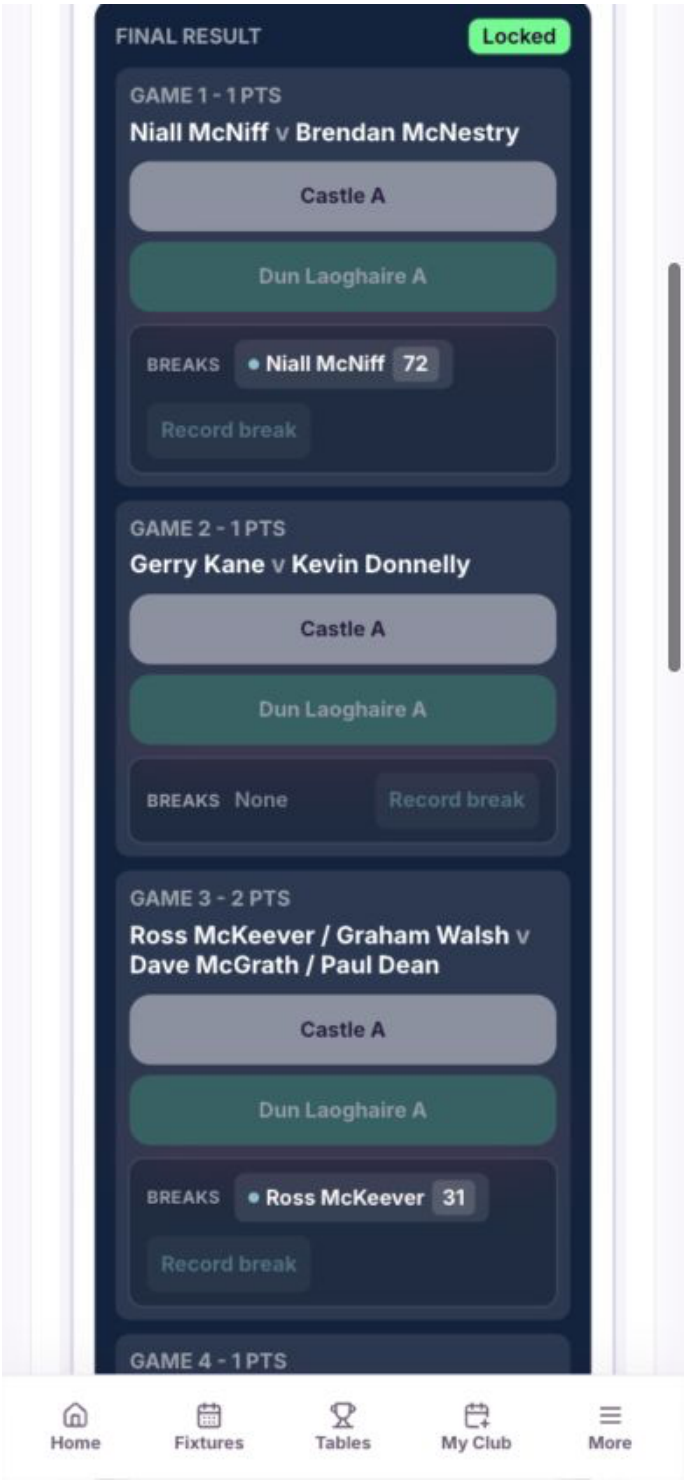

- Open your team match from Fixtures when manager actions are available.
- Published lineups and completed matches are locked, so check carefully before finalising.
- A completed match shows the score, game winners, breaks and lineups.

Live completed match detail screen.

Scores and breaks

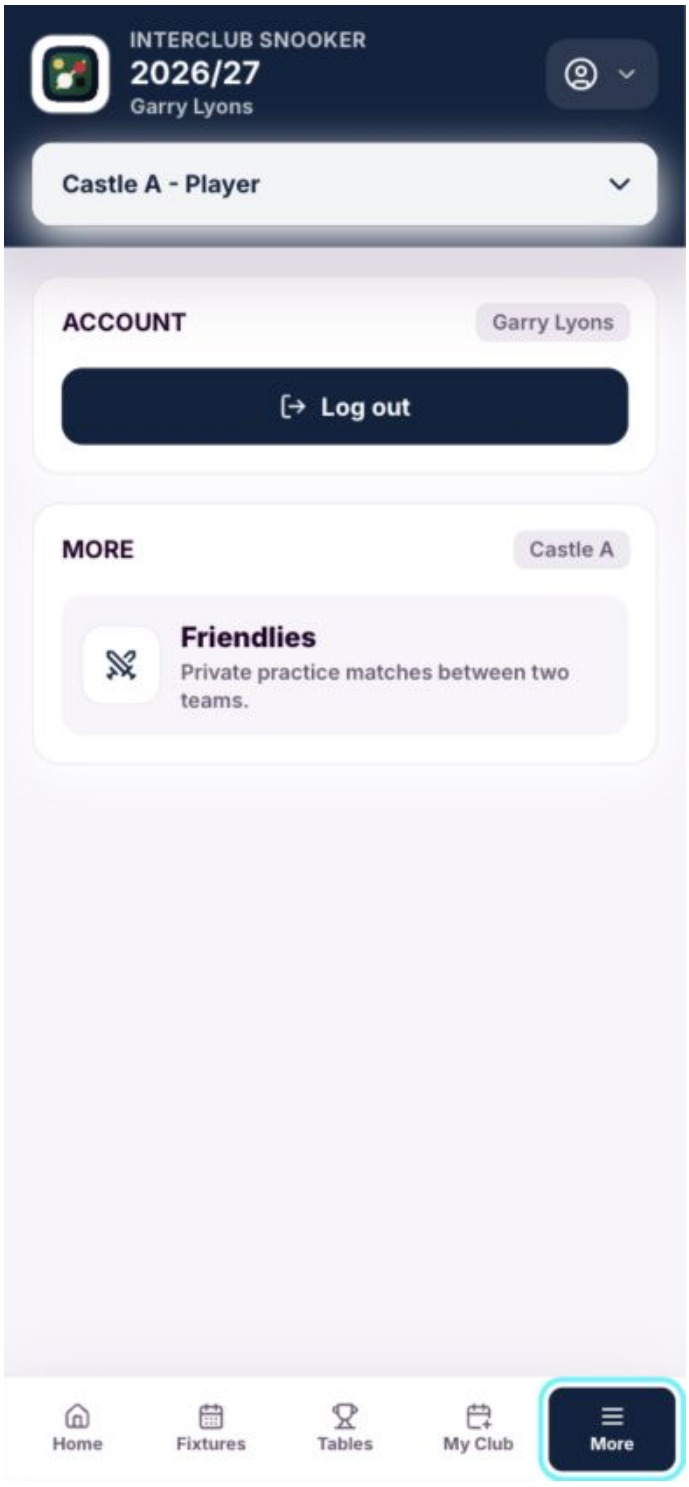

- Singles are worth 1 point. Doubles are worth 2 points.
- Breaks are optional and should be recorded only when they matter for player records.
- Once the match is completed, editing is locked and players can view the details without changing them.

Live match detail with score and break information.

Bottom navigation

- Home: your summary and the most useful information for your role.
- Fixtures: weekly fixtures, results, live scores and manager match actions.
- Tables: league tables and player stats.
- My Club: bookings, competitions and club activity.
- More: less frequent items such as friendlies.

Live More screen.

Important manager note

- For a live team-picking screenshot, the production app needs an active unlocked fixture. The current live test data shown here is already completed and locked.
- When an active fixture is available, the same Fixtures route is where managers pick teams, publish lineups, enter scores and record breaks.
- This guide can be refreshed quickly with new real screenshots once an active test match is loaded.
